The Ltd. Farm of Mulinello is ideal for management and manufacturing of the Mediterranean light pig for slaughtering, it was the first to select this kind of animal which is mainly farmed in the south, achieving significant outcomes in the genetic field.

This Agricultural Holding boasts a closed-loop farming system for pigs, animals from 110 to 120 kilos, born and bred in Sicily, its own slaughterhouse, a meat processing laboratory and a delicatessen where the sausage products are made using hand-tied natural casings.

The Ltd. Farm of Mulinello, relying on the knowledge of food and medical-veterinary experts, after years of planned researches, has reached some goals, which are:

genetic improvement to get balancing between the amount of fat and the amount of lean meat of the animals in order to ensure the quality of the final product.

We have gradually come, by market analysis and uninterrupted research, to the ideal pig genotype to meet market demands.

Thanks to the animals bought in Italy and abroad, the Farm has selected a team of breeders through impeccable pedigree selections.

Feeding careful to nutritive and appeal requirements by feeds originated exclusively from plants.

Surrounding suitable to guarantee the animal wellness.

Research for a total quality, within our own farming and slaughtering building, by using two important factors: sow productivity and meat quality.

Thanks to a totally computerized management policy we opted in favor of meat traceability and tracing, whereby the animal is followed since the moment it is slaughtered and at every time of manufacture by a tracking number/batch.
